

NCONN – A VIDEO CONFERENCING & COLLABORATION PLATFORM

NConn is a Video Conferencing & Collaboration Platform developed by Neti Software Services. This is available for Corporates as well as for Individuals. For existing web applications, NConn can quickly add the Video Conferencing capability. NConn is available on the web / cloud or can be setup as an enterprise instance. Bandwidth requirements vary; depend upon the quality selected and the number of parties in the video conference.

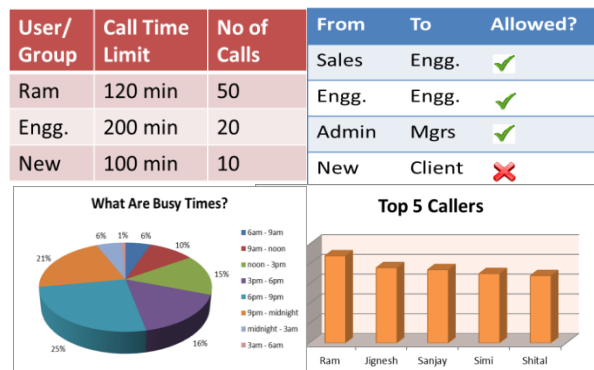

FEATURES

- **Thin Client; No plugins required** **Thin Client:** NConn users need not install any software. The Video Conferencing can be initiated from browser (Chrome, FireFox).
- **Role Based Access Control** **Easy Integration:** NConn can be easily integrated into most web applications / web sites. With the integration, the application / web site users can benefit from the power of video conferencing / video chat without switching to an external application, leading to a higher user satisfaction and productivity levels.
- **Secure** **Role Based Access Control:** Based on the type of the user, the privileges and functionality available will be tailored. Roles are based on the vertical solution.
- **Analytics** **Analytics:** The administrator has access to reports which help in administering the system better.

NConn Platform is available as solutions catering to the different verticals.

NCONN – CORPORATE

This software addresses the corporate video conferencing needs. Employees within an enterprise (and their customers) can connect from remote locations and have a video conference. The call can be recorded for future use. Administrator can define the call restrictions and call quotas to restrict the calls as well as the permitted call time for each employee as per the corporate policy. The analytic reports will give the administrator a detailed view of the call details and volume.

NCONN – RECRUITMENT

This software is customized for recruitment teams and solves the problem of conducting interviews of the candidates remotely. Candidates can join the interviews from any location just by using a PC / laptop with

Neti Software Services LLP

an internet connection and Chrome Browser. Up to 3 interviewers can interview the job seeker. The interview of the job seeker can also be recorded for future reference. NConn – Recruitment also supports offline interviews and assessment.

NCONN – HEALTHCARE

This software is customized for healthcare teams. Doctors and health experts can connect from remote locations and advise the patients and other doctors. Doctors can also use this solution to share expert advice and lectures with students.

NCONN – TRAINING

NConn – Training takes care of the online training needs. It helps in the online delivery of training sessions by instructors from multiple locations. Recording of the sessions by the instructors can be done for future reference. A whiteboard is available letting the instructor share his ideas with the attendees during the lecture.

NCONN – SUPPORT

This takes care of the support needs of the various teams. When the online users need support, NConn – Support helps in quick and more personalized resolution of the user issues by providing a video chat and conference capabilities. The users will be able to connect to the support centre executive who will try and resolve the issue. If he cannot resolve the same, he can conference additional experts. The customer communication can be recorded for future reference and training purposes.

SUMMARY

NConn provides a secure way to collaborate. Corporates can reduce their costs by switching to NConn. For corporates without a video conferencing solution, NConn saves time & money by reducing travel. Trainings, Conferences, Meetings can now reach to a larger audience. NConn is one of the fastest ways to incorporate Video Chat / Conferencing to most of the web applications, enabling their application users to collaborate even more.

Add Video Conferencing capabilities to your application quickly
